

Course Scope and Objectives

The Dehydration Experts course provides specialized training in the design, operation and troubleshooting of dehydration and refrigeration processes. The course scope and objectives include:

- Review of the science behind the formation of hydrates, dehydration and refrigeration systems and their application in gas processing;
- Provide an overview of current technologies for hydrate control, dehydration, hydrocarbon recovery and hydrocarbon dew point control;
- Provide practical process knowledge to facilitate system performance and optimization; and
- Equip participants to recognize and troubleshoot performance problems.

The course provides a comprehensive overview on the need for, and application of dehydration and refrigeration technologies in gas processing. It also presents case studies to expose participants to a range of real-life operational problems. Each case is discussed in detail and solutions are provided. The course presents theoretical principles of dehydration and refrigeration but primarily focuses on practical aspects of system design and operation.

Who Should Attend?

The course will be of value to anyone interested in obtaining information on the current status of dehydration and refrigeration in gas processing. In particular, scientists, engineers and operators involved in the design and operation of dehydration systems will obtain practical information to help improve system performance.

Dehydration Experts is a division of Sulphur Experts Inc. and operates internationally out of Technical Centres located in Canada, the United States and The Netherlands. Additional information can be obtained by contacting any of our Regional Offices or by visiting our website at:

Hotel Information

Kananaskis, Alberta

September 21 - 23, 2015

Delta Lodge at Kananaskis

The Delta Lodge at Kananaskis has been home to our Canadian Technical Training Courses for more than 20 years. This beautiful hotel is located in the Rocky Mountains close to the Nakiska ski resort at Mt. Allan (site of the 1988 Olympic Winter Games). The hotel is also famous for hosting world leaders during the G8 Summit in 2002. The Lodge at Kananaskis is a resort hotel and provides excellent opportunities to enjoy hiking, mountain biking or sightseeing in the pristine Canadian Rockies. As such, it is an excellent venue for our courses, far away from the pressures of the work environment.

Registration Procedure

Step by step procedure to ensure successful registration.

- Step 1** Visit our web page and select "Training" at www.SulphurExperts.com. The website includes content details and registration information for all courses.
- Step 2** Select your desired course location.
- Step 3** Obtain management approval.
- Step 4** Enquire if any colleagues from your facility would like to take advantage of the reduced Colleague Fee.
- Step 5** Complete your on-line registration being careful to fill in all requested information.
- Step 6** Your registration is not confirmed until payment is received. Method of payment is by secure on-line credit card. We accept VISA , MasterCard , and AMEX.
- Step 7** If you cannot register on-line please contact us by fax or e-mail.
- Step 8** Register on-line for your hotel accommodation
- Step 9** Make international Visa and travel arrangements

CONFIRMATION:

You will be contacted by the Coordinator at several points during this process and will receive written confirmation by return e-mail or fax once your registration is received. You will also receive full travel instructions well before course dates.

All enquiries please contact:

Speakers

Bill Chu

Michael Sheilan

The Dehydration and Refrigeration Course is an intense two and a half day session (running from Monday morning to Wednesday noon) covering everything from the science behind the technologies to system design, optimization and troubleshooting. This course is provided in conjunction with the Sulphur Experts and Amine Experts technical training course series offered annually at Kananaskis and runs concurrently with the Sulphur Recovery course.

The course is presented by Bill Chu and Michael Sheilan. Bill Chu is a senior process specialist with Dehydration Experts with extensive field experience in optimizing glycol dehydration and refrigeration systems. Michael Sheilan is an internationally recognized senior process engineer with Amine Experts with extensive experience in optimizing and troubleshooting gas treating systems.
